Test ID	Test Cases	Pre-Condition	Test Steps	Expected Result	Test Data	Actual Result	Status	Priority	Notes	
TC_02_01	Verify the Search function is working correctly for simple file name search	Indexing should be completed successfully	1. Navigate to the Search tab and type any file name on the search bar at the middle 2. Keep the filter on All or Name/Path	Giving the exact file as the result	Type "DeepFind" on the search bar	DeepFind.exe file came as the first result	Passed	High		
TC_02_02	Verify whether the path searching is working correctly without any error	Indexing should be completed successfully	1. Navigate to the Search tab and type a file path on the search bar 2. Keep the filter on All or Name/Path	Giving the exact file giving with the path	Type "D:\External Works\Portfolio\FileMind\DeepFind\app\release\win-unpacked" on the search bar	Error msg appear "Search could not be completed"	Failed	High		
TC_02_03	Verify whether the Content matching is working correctly without any error	Content Extraction should be completed Successfully	1. Navigate to the Search tab and type a unique phrase(with 2 words) to identify the file with that phrase on the search bar 2. Keep the filter on All or Content	Giving all the files containing the input	Type "Resilience & Observability Playbook for a Distributed System" which is in the EA_Group_Project_Options_2026.pdf file	EA_Group_Project_Options_2026.pdf came as the first result	Passed	High		
TC_02_04	Verify whether the Semantic Search is working correctly without any error	Semantic embedding should be completed	1. Navigate to the Search tab and type any natural style phrases on the search bar 2. Keep the filter on All or Semantic	Giving all the files satisfy the phrase input mentioned	Type "Pdfs in Academic folder" in the search box	Give all the PDFs in the Academic folder	Passed	High		
TC_02_05	Verify when we search same file name or same query to search results should be appear without single second delay	The search query should used before	1. Search a file name (ex. Script.js) 2. Close the result and after few minutes use the same query (Script.js)	Same result of the first query should appear without any delay	Searched script.js first and do some other queries and again searched script.js	Results appear quickly without any error	Passed	Medium		
TC_02_06	Verify whether user can open the exact file they need after search by clicking the "Open" button	Search anything and got a result of it	1. Search and obtain any file 2. Navigate to the required file and see the right side of the result 3. When hovering on any result also can see 4. Click the "Open" Button	If it is a direct opening file it should immediately open If it is a file that need to select any app to open window of selecting those app should open	Try to open Script.js file came as a result of previous test	Window of apps to open Script.js (vs code, antigravity) is came	Passed	High		
TC_02_07	Verify whether user can open the exact folder containing the file came as result after search, by clicking the "Folder" icon	Search anything and got a result of it	1. Search and obtain any file 2. Navigate to the required file and see the right side of the result 3. When hovering on any result also can see 4. Click the "Folder" icon	Folder that containing the file is opens in windows file explorer	Try to open Script.js file's folder came as a result of previous test	Opens the folder that contain Script.js in windows file explorer	Passed	High		
TC_02_08	Verify whether File is opening by double clicking on the result	Search anything and got a result of it	1. Search and obtain any file 2. Double click on the result	If it is a direct opening file it should immediately open If it is a file that need to select any app to open window of selecting those app should open		Window of apps to open Script.js (vs code, antigravity) is came	Passed	High		
TC_02_09	Verify whether the "Reset app data" function is working	App should run for while	1. Navigate to the settings tab -> danger zone 2. Click "Reset App Data" button and confirm the resetting	All the indexes content extraction tags and other data should be erase and on the system tab the numbers should be resets infront of the "App data", "DataBase", "Semantic content"		Numbers become 0	Passed	High		
TC_02_10	Verify whether file watcher function is working (function that watch for newly creating files and make them index content extraction and other ingestion steps which ready that file to the searching)	All ingestion steps should completed	1. Create new text file 2. Save it in anywhere that is not excluded manually from searching 3. Wait few seconds and search for that file using any method	File we added is showing in the result	1. Create new file in download folder named "test.txt" 2. And come to the app and search the file name	Showing the test.txt file as the result	Passed	High		
TC_02_11	verify whether changing file content can detect from the app	app should installed	Change the content of a file already scanned by the app	When search by that changed content should give that file as the result	Add a "to check" text to the "test.txt" file and search in the app using "to check"	result came as "Nothing matched"	Failed	High		
TC_02_12	verify whether changing file Name can detect from the app	app should installed	Change the name of a file already scanned by the app	When search for the name changed file that file should came as the result	Change the file name "test.txt" -> "chngtest.txt" and search in the app using "chngtest.txt"	chngtest.txt file came as the result	Passed	High		
TC_02_13	Verifying stop watcher is working	file watcher should running	1. Navigate to activity -> file system watcher and click on stop watcher 2. Then add a new file or change name of existing file 3. Search for new or changed file name	File should not be come as a result	1. Stop the file watcher 2. Change the name of the chngtest.txt to change.txt 3. search using change.txt	result came but not the file changed the name	Passed	High		
TC_02_14	Verify start watcher again is working as same as before	file watcher should not running	1. Navigate to activity -> file system watcher and click on start watcher 2. Search for new or changed file name before	When search by that changed content should give that file as the result	1. start the file watcher 2. search using change.txt	change.txt file came as the result	Passed	High		
TC_02_15	Verify files inside excluded folders shouldn't scanned and not showing as results of searching	App is running without any error	1. Navigate to library tab 2. Add a folder to by clicking add exclusion 3. Search a file inside that folder	File should not be come as a result	1. Add the Enterprise Architecture folder to the exclusion 2. search the file "EA_Group_Project_Options_2026.pdf" inside the Enterprise Architecture folder	Nothing came as the result	Passed	High		
TC_02_16	Verify files inside excluded folders are scanning and showing in the search result	Folder removed from the exluded folders	1. Navigate to library tab 2. Delete the folder from the exclusion list 3. Search a file inside that folder	Files should come as the result	1. Delete the Enterprise Architecture from exclusion list 2. search the file "EA_Group_Project_Options_2026.pdf" inside the Enterprise Architecture folder	"EA_Group_Project_Options_2026.pdf" came as the result	Passed	High		
TC_02_17	Verify files inside folder list of system exclusion are not coming as results for any search	All ingestion steps should completed	1. Navigate to library tab 2. check the list of system exclusions 3. Search a file inside any of that folders	Any file inside those folders should come	1. Search by "exe inside program files(x86)"	Nothing came as the result	Passed	High
