

Testing DeepFind Search Function

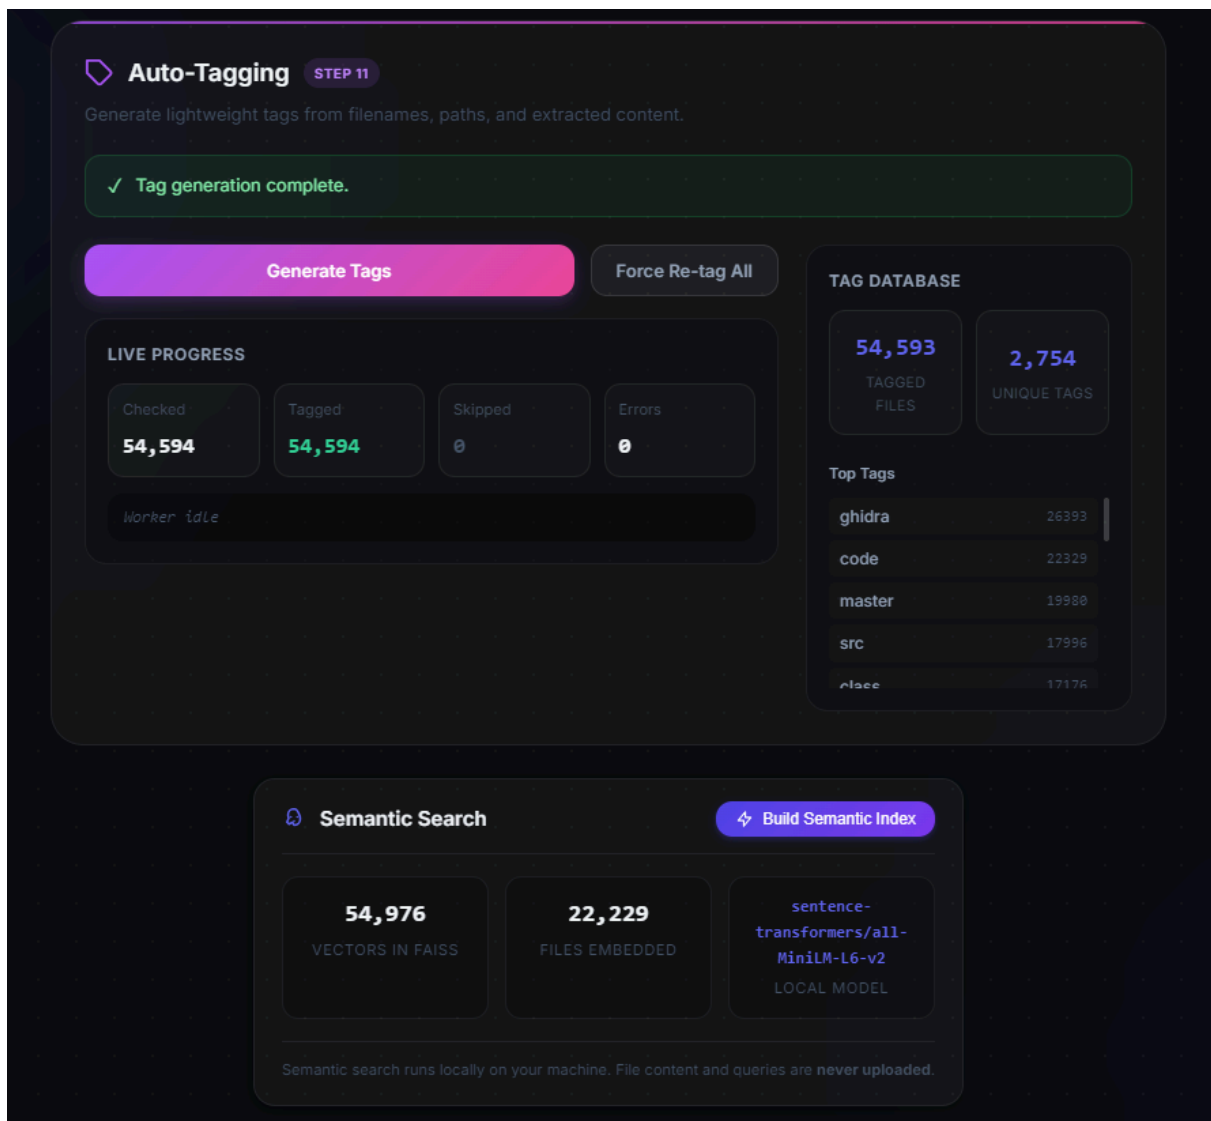

Index Sources (3/8) include drive D: and E: and the Akka folder

Index Sources (3/8) include drive D: and E: and the Akka folder Indexing and content extraction

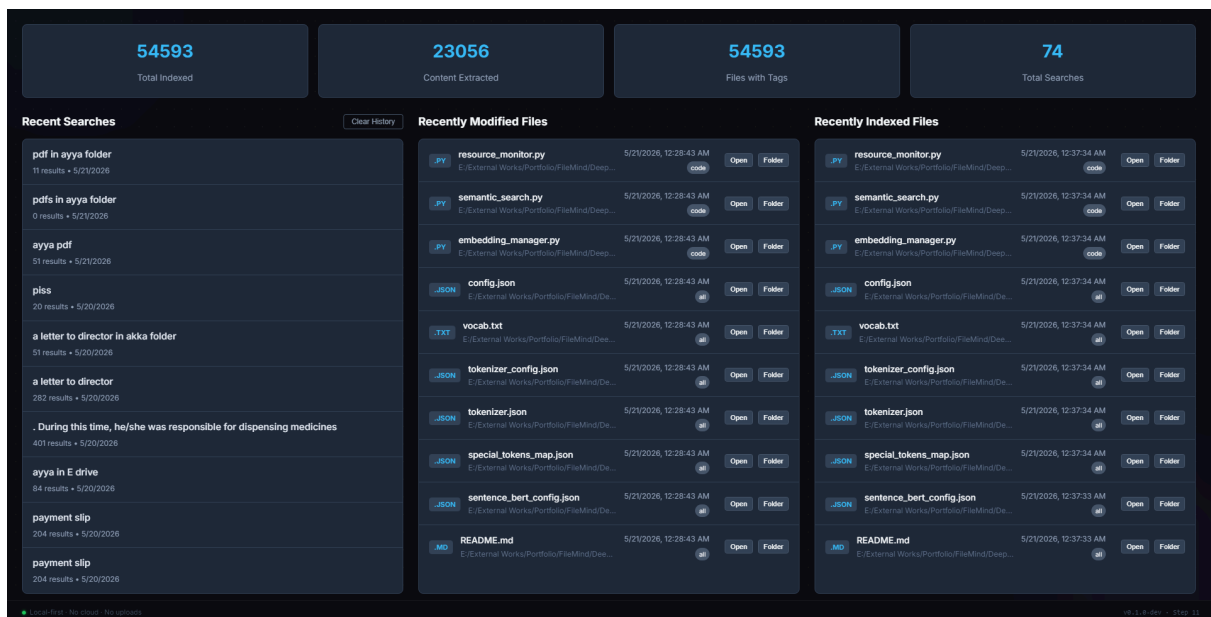

Tagging and Semantic Indexing

Search History (may be affect for next searches)

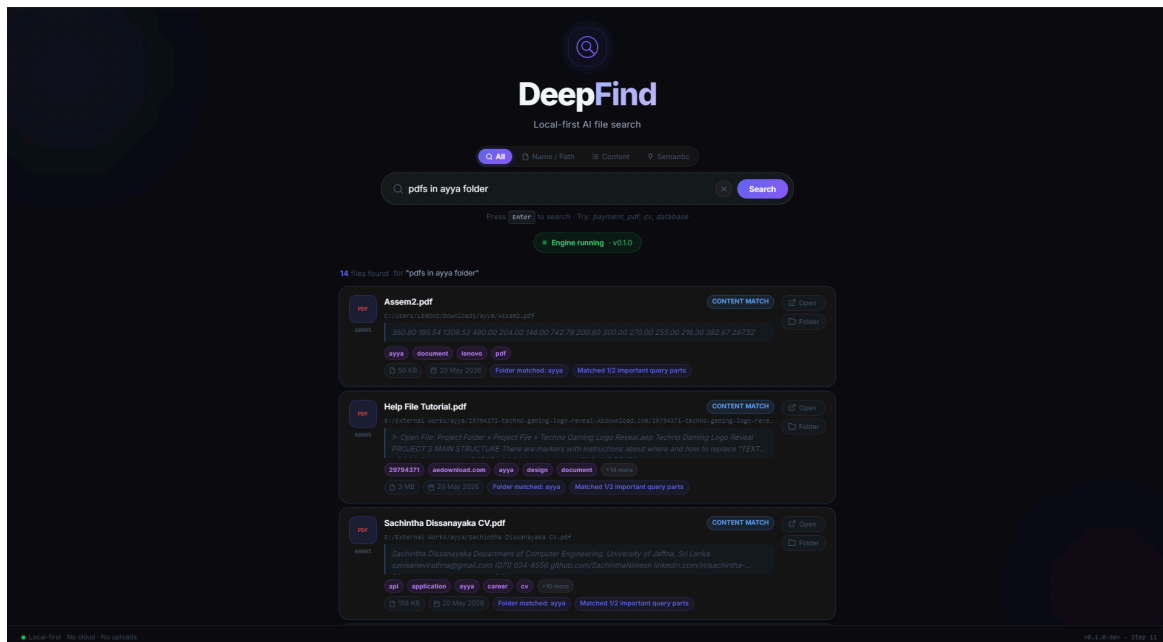

Search Issues:

Search prompt : "pdfs in ayya folder"

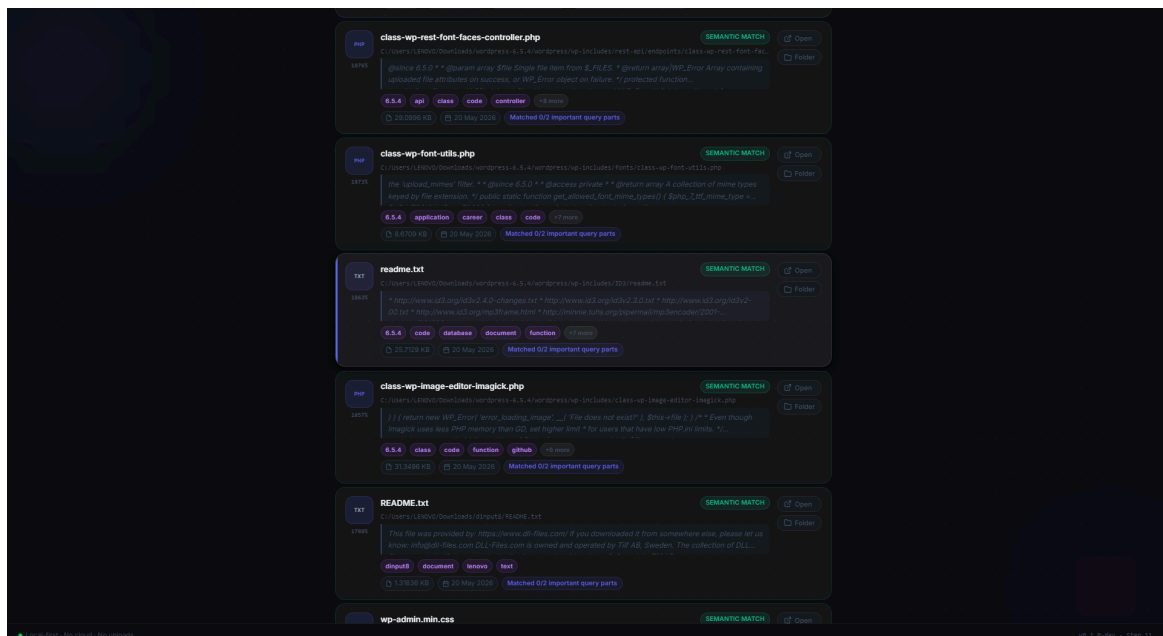

Expected Output : pdfs in Folder 'Ayya'

▼ Result :-

Content Matched and give pdfs in the ayya folder

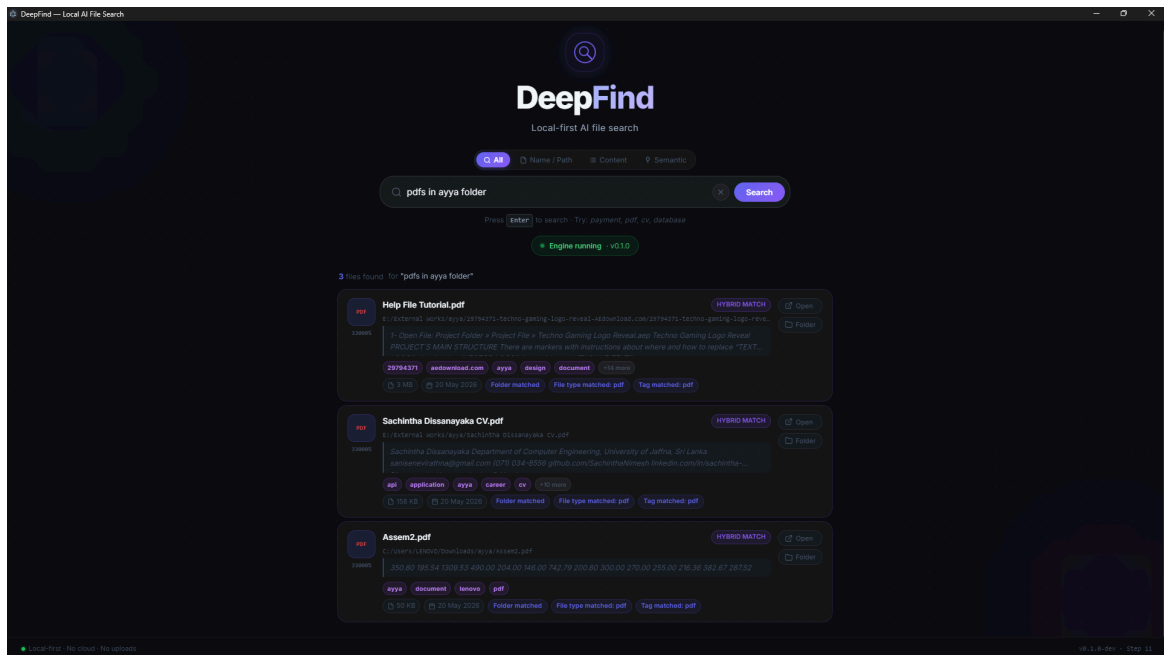

There were some results under these correct results that are Absolutely inappropriate with given prompt and it is even saying "0/2 important query parts are matched"

Reason assumption : Always check something from semantic indexes and try to match something

Fixed at 5.27p.m 5/21/2026

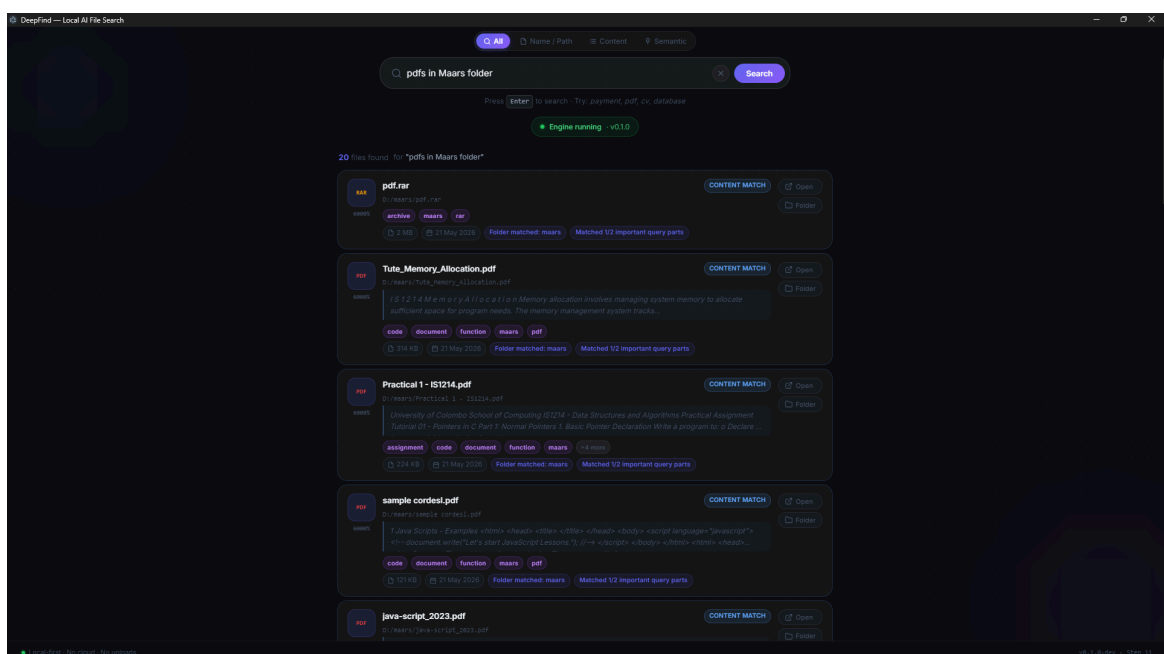

Search prompt : pdfs in Maars folder

Expected Output : pdfs in Folder 'Maars'

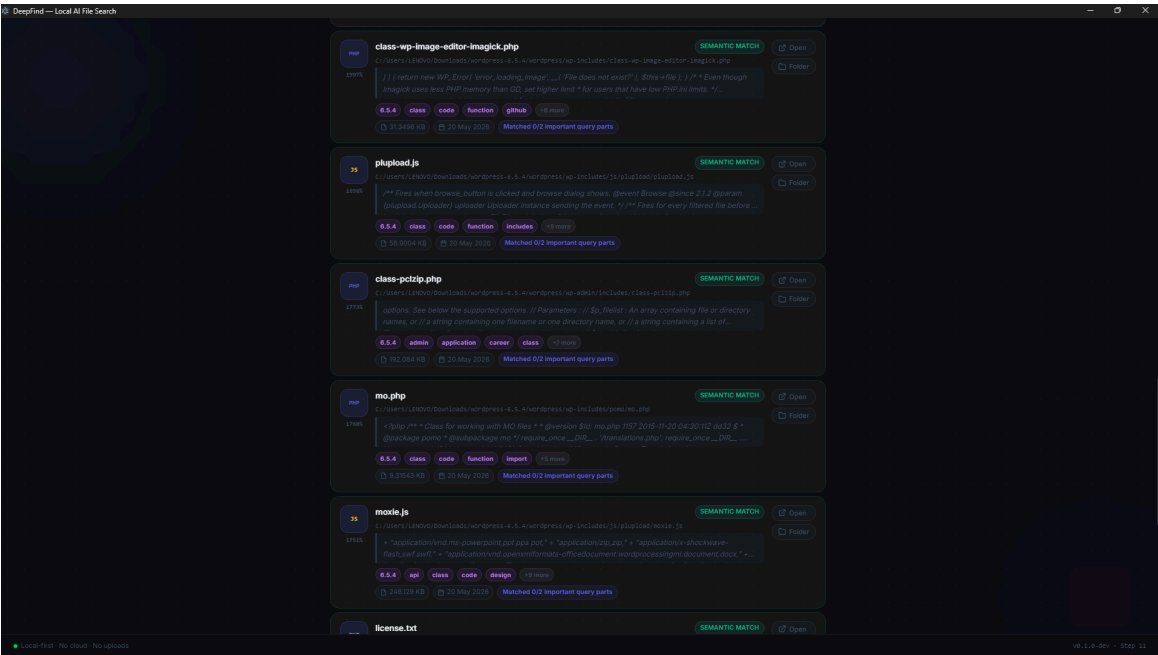

▼ Result :-

Priority given to the name and give first result name as a pdf.rar (not a pdf).
But in the relevant folder

And then the extension matched and gave pdfs in that folder

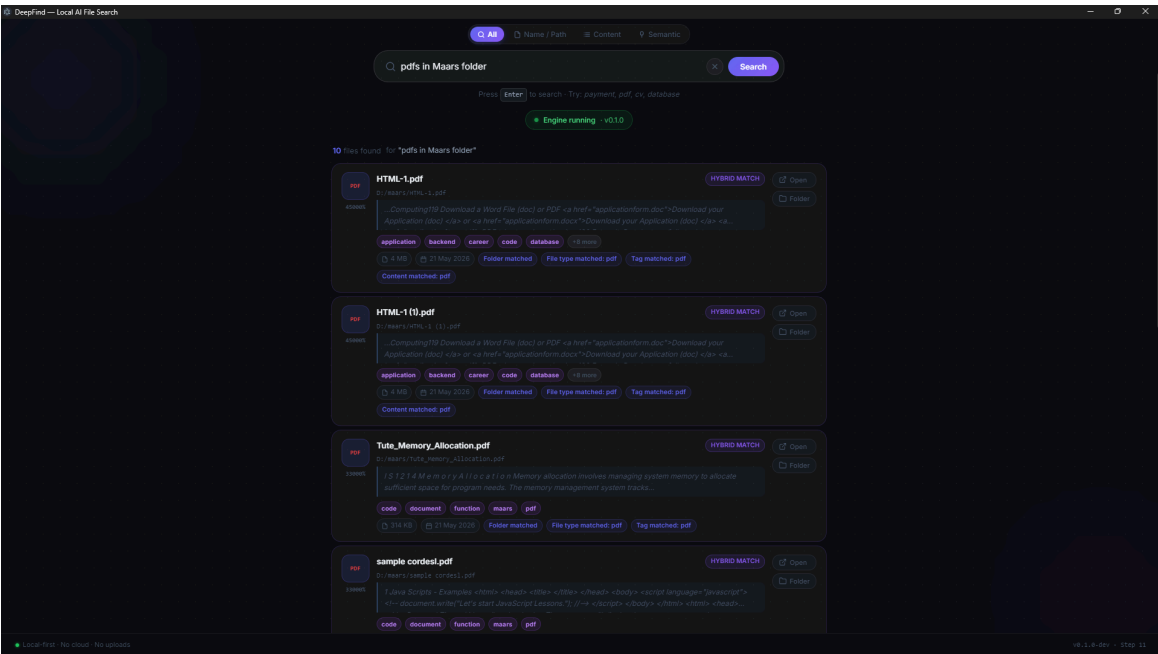

Here also unmatching results are there by saying semantic matching (no name matched and also the folder)

Reason assumption : Always check something from semantic indexes and try to match something

Fixed at 5.27p.m 5/21/2026

Search prompt : Labsheet 2025

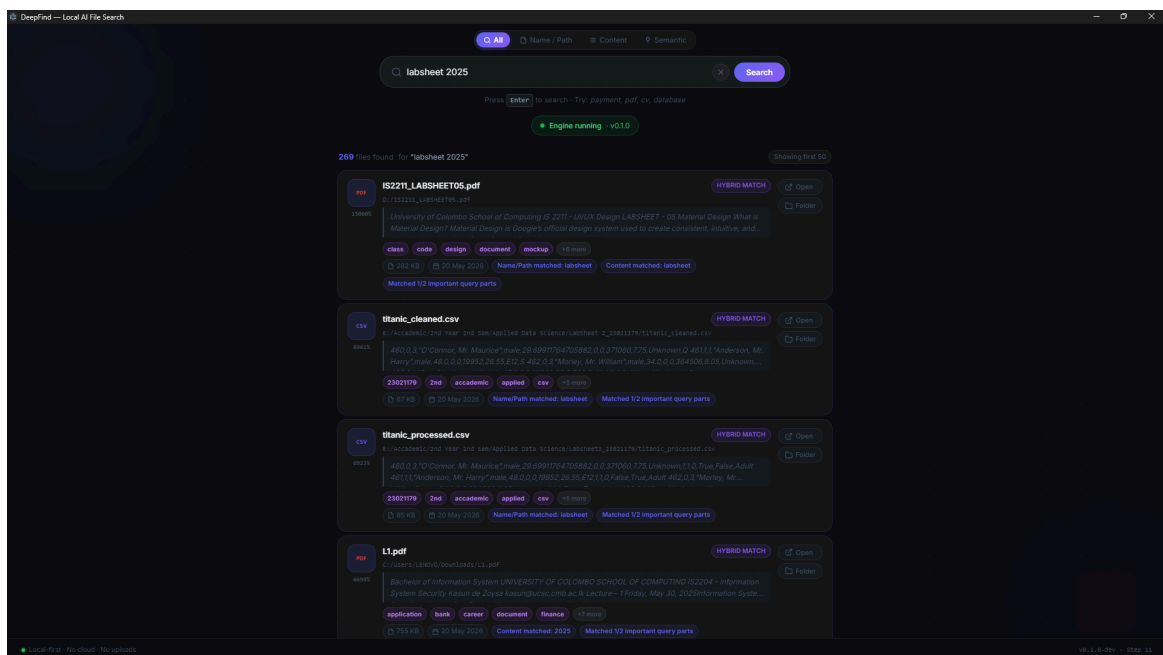

Expected Output : Labsheets that are last modified in 2025 year

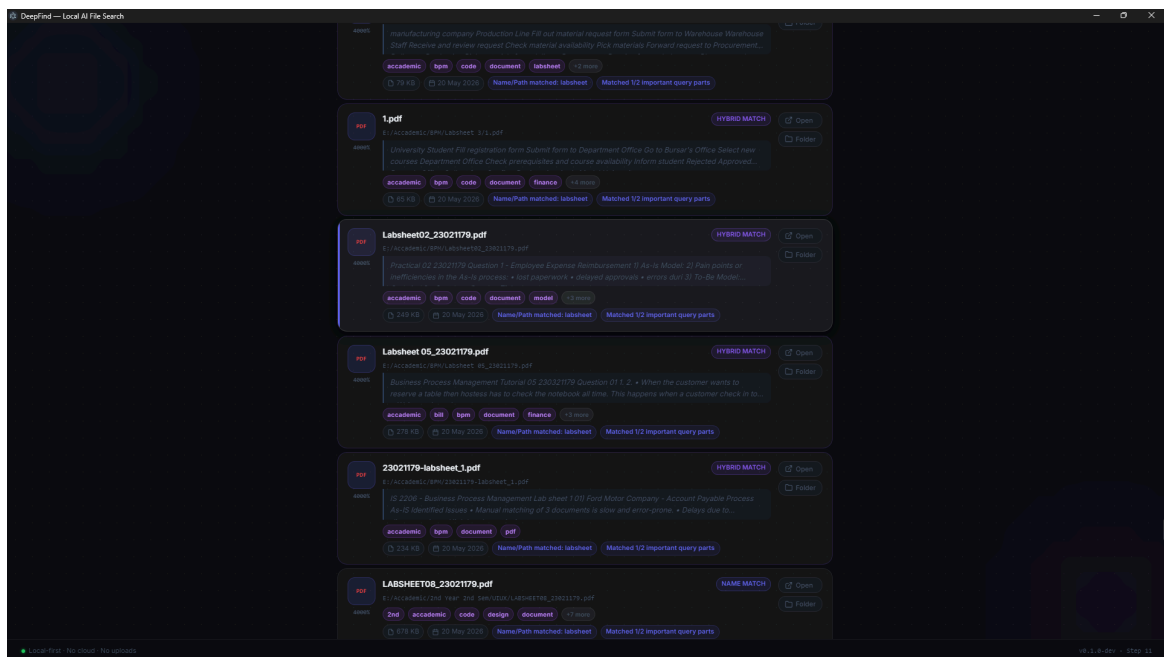

▼ Result :-

in the system there are files like here

	IS2210_Assignments.pdf	3/18/2026 10:30 PM	Microsoft Edge P...	49 KB
	IS2210_Lab_sheet_02 (1).pdf	12/29/2025 10:11 AM	Microsoft Edge P...	162 KB
	IS2210_Lab_sheet_03-1.pdf	12/29/2025 10:10 AM	Microsoft Edge P...	72 KB
	IS2210_Lab_sheet_04.pdf	1/13/2026 1:23 PM	Microsoft Edge P...	218 KB
	IS2211_LABSHEET05.pdf	1/1/2026 1:31 PM	Microsoft Edge P...	282 KB
	IS2211_LABSHEET06.docx.pdf	1/8/2026 1:12 PM	Microsoft Edge P...	224 KB
	ISMS Shortnotes.pdf.crdownload	3/18/2026 7:20 AM	CRDOWNLOAD File	947 KB

But the app given only one output to match the labsheet name and at the end it gives results of files name as "Labsheet"

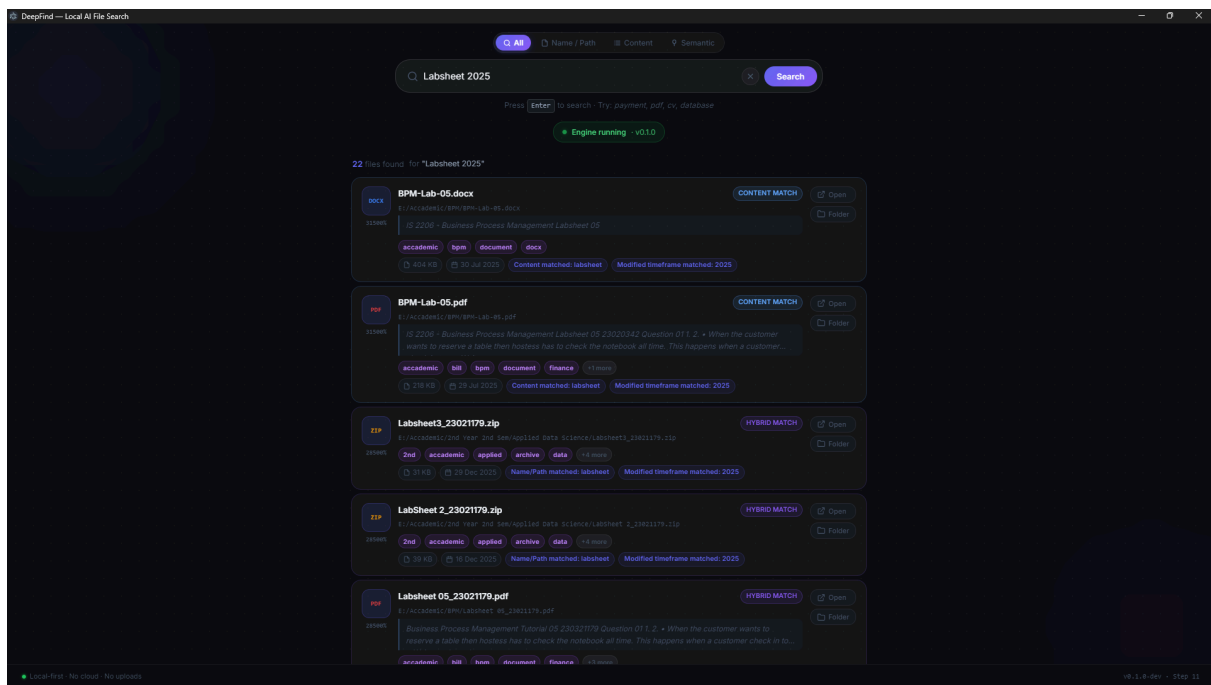

Some given in between them that matches to the 2025

Fixed at 8.37p.m 5/21/2026

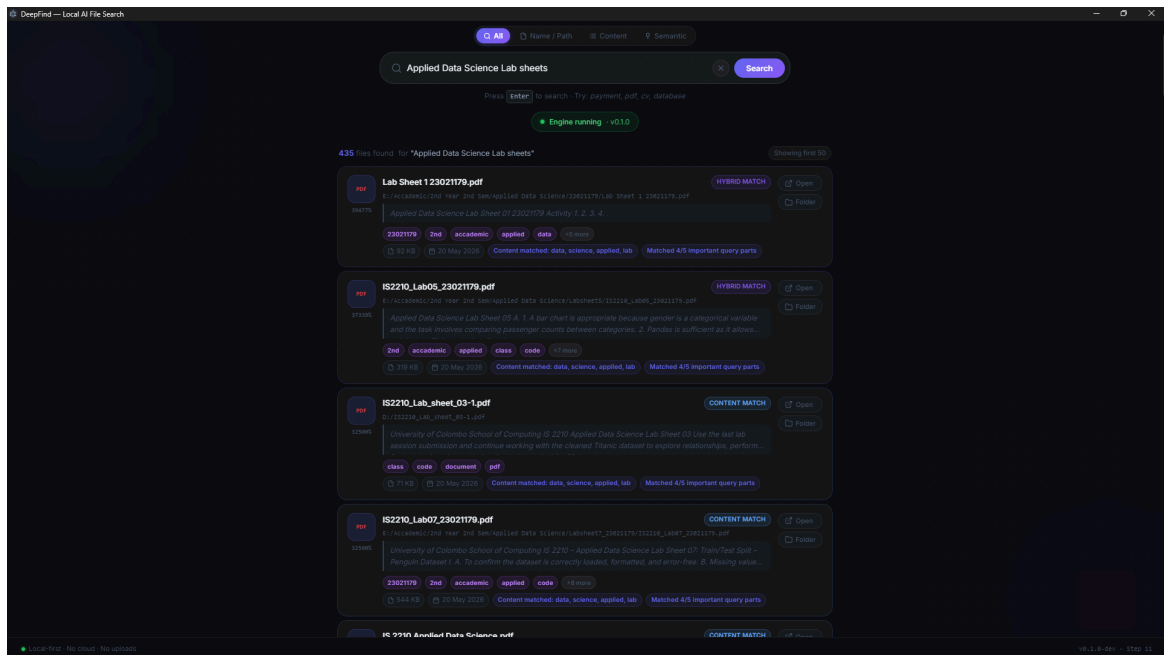

Search prompt : Applied Data Science Labsheet

Expected Output : Labsheets of the subject "Applied Data Science"

▼ Result :

It gives nearly perfect to the Output I want (I think it prioritize to the name and the path and also some are from the content matching)
this prompt is pretty obvious to give the perfect result as it contain the detailed requirement

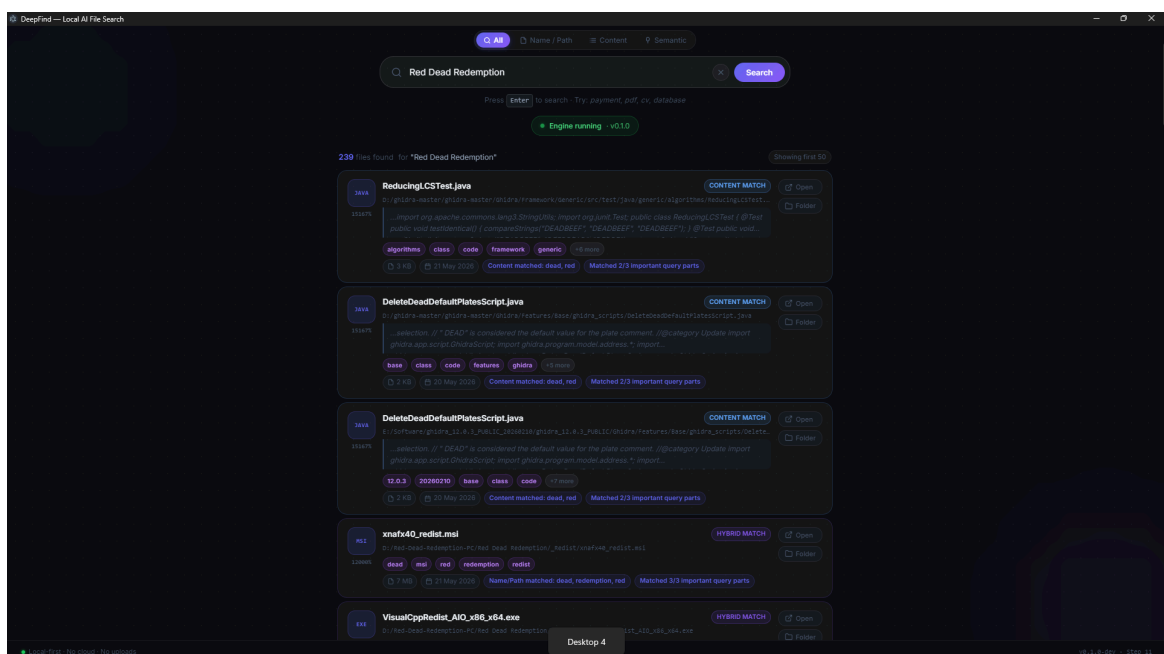

Search prompt : Red Dead Redemption

Expected Output : files in the Read Dead Redemption folder

▼ Result :-

Totally wrong it gives some content matching result but not matching whole prompt (they matched by breaking the words of the prompt like "Red", "Dead", "Redemption")

Issue cause Identified at 12.51a.m 5/23/2026

search try to split the prompt and get tags of them and search individually.

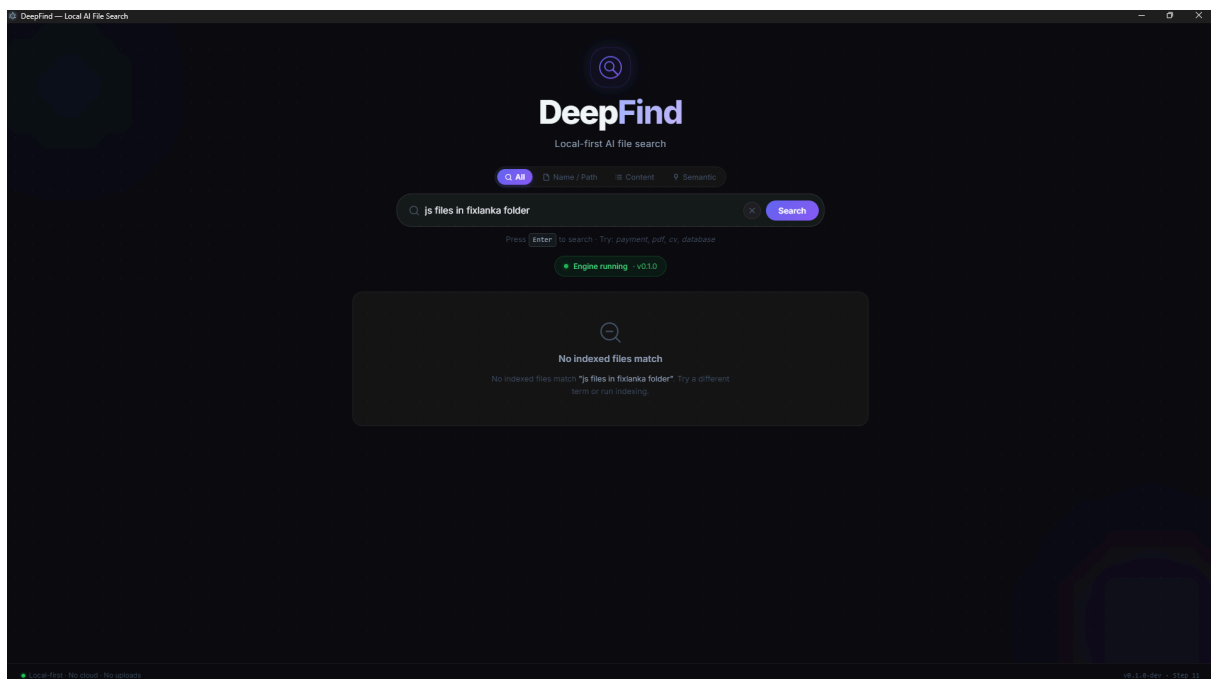

Solution Suggestion: add a search priority for the files/folders matches all the different tags created using the prompt (ex:- when search for "Red Dead Redemption" it do search by the same way by making seperate 3 tags ("Red","Dead","Redemption") but it also search for matching all the tags in one file if anything found with all tags matched to a file it gives the highest priority and then reduce the priority when the number of matching tags are reducing and that priority is subjecting to the existing priority(name/path, content and etc..)

Search prompt : js files in fixlanka folder

Expected Output : java script files in the fixlanka folder

▼ Result :-

nothing appear as search result

Installed Successfully

Start the app

it is working properly but it is taking like 30s to 1 minute to start the engine and then starting the indexing, content extraction, Tagging etc.

But the problem is coming when we close it and start again

I closed and started the app in mid of those indexing and other processes (before finish that processes)

when start again those processes start from beginning
